

**VOLUNTARY REMEDIATION PROGRAM
DEPARTMENT OF ENVIRONMENTAL MANAGEMENT**

PROJECT SUMMARY

Site Name:	Trunkline Gas, North Judson Compressor Station
Applicant's Name:	Trunkline Gas Company
Site Location:	6580 S. 200 East Knox Starke County
VRP Site Number:	6960305
Project Manager:	Damon Ridley
Date Application Received:	March, 1996
Date Project Completed:	September, 1998
Project Duration:	2 years, 6 months
Contaminant Group(s):	Polychlorinated Biphenyls (PCBs)
Media Cleaned Up:	Surface Soil
Cleanup Goals Achieved:	Tier II Nonresidential
Deed/Land Use Restrictions:	Nonresidential

Project Description: As a part of a company-wide assessment of compressor stations in 1987, the company detected PCB contamination in air compressors, air pressure lines, and soils at the North Judson facility. The PCB source originated from the pre-1973 use of PCB-containing lubricants in air compressor units. As a part of a voluntary remedial measure in 1992, a manifold area sump was decontaminated, and a waste oil separator removed and disposed. In June, 1996, Trunkline decontaminated the compressed air system. After evaluation of the sampling data, PCB contamination in soils was determined to be the singular concern of the VRP project. The areas of concern were excavated and disposed properly. Confirmatory sampling indicated concentrations of PCBs below VRP cleanup standards.
